Description																								
We are getting internal requests for the ability to set the various issue statuses (states, statii?) that map into 'Issue Closed' on a per-project basis.																								
Currently the issue statuses mapping affects all projects in the redmine instance. Our development projects have different status models, and this change would allow developers to use the status model that fits their workflow.																								
Example:																								
Project A would like the following:																								
<table><tr><td>Status</td><td>Default value</td><td>Issue closed</td></tr><tr><td>New</td><td>X</td><td></td></tr><tr><td>Assigned</td><td></td><td></td></tr><tr><td>Resolved</td><td></td><td>X</td></tr><tr><td>Feedback</td><td></td><td></td></tr><tr><td>Closed</td><td></td><td>X</td></tr><tr><td>Rejected</td><td></td><td>X</td></tr></table>				Status	Default value	Issue closed	New	X		Assigned			Resolved		X	Feedback			Closed		X	Rejected		X
Status	Default value	Issue closed																						
New	X																							
Assigned																								
Resolved		X																						
Feedback																								
Closed		X																						
Rejected		X																						
Project B would like the following:																								
<table><tr><td>Status</td><td>Default value</td><td>Issue closed</td></tr><tr><td>New</td><td>X</td><td></td></tr><tr><td>Assigned</td><td></td><td></td></tr><tr><td>Resolved</td><td></td><td></td></tr><tr><td>Feedback</td><td></td><td></td></tr><tr><td>Closed</td><td></td><td>X</td></tr><tr><td>Rejected</td><td></td><td>X</td></tr></table>				Status	Default value	Issue closed	New	X		Assigned			Resolved			Feedback			Closed		X	Rejected		X
Status	Default value	Issue closed																						
New	X																							
Assigned																								
Resolved																								
Feedback																								
Closed		X																						
Rejected		X																						
I've looked through the feature requests and plugins and haven't seen anything that enables this. Enlightenment requested if I'm blind.

sorry, but i set my +1 wrong.

It doesn't make sense to have close status per project but per tracker. At the moment you can define workflow per tracker but only one start and end state for all trackers.

+1 for optionally own start and end state per tracker not per project

This relates to [#973](#).

Maybe it could be closed as duplicate? If the whole functionality of [#973](#) getting implemented, he should be able to implement this!
