Resolution:	Invalid		**Affected version:**	

Description

Hi guys,
I'm iPhone developer but I've to setup redmine for my company.
I'm working on it from about 3 days and can't fix one problem.
I want authentication via apache2 + redmine + svn + https + postgres on Ubuntu 11.10.

I've created few repositories manually and added files there.
I followed:
http://www.redmine.org/projects/redmine/wiki/Repositories_access_control_with_apache_mod_dav_svn_and_mod_perl

Looks like I'm able to login to svn(when i try to checkout project) with redmine db user (because it's giving me other info when I fill wrong password or user), but I can't access repositories.

I'm getting:
You don't have permission to access /svn/bada-sprint on this server.

Tried about 100 solutions but nothings helps: permissions to www-data for svn folder, etc.

Here is my /etc/apache2/sites-enabled/myown-ssl file:

@<VirtualHost *:443>
ServerAdmin webmaster@localhost

   1. <Limit GET PROPFIND OPTIONS REPORT>
   2. Require valid-user
   3. Allow from all
   4. Satisfy any
   5. </Limit>
   6. AuthUserFile /etc/subversion/passwd   # write access
   7. <LimitExcept GET PROPFIND OPTIONS REPORT>
      Require valid-user
   8. </LimitExcept>

   1. for mysql
      #RedmineDSN "DBI:mysql:database=databasename;host=my.db.server"
   2. for postgres
      RedmineDSN "DBI:Pg:dbname=redmine_default;host=localhost"
   3. for SQLite3

   1. RedmineDSN "DBI:SQLite:dbname=database.db"

```
RedmineDbUser "redmine"
     RedmineDbPass "xxxxx"
#SSLRequireSSL
 &lt;/Location&gt;
```

SSLEngine on
SSLCertificateFile /etc/apache2/ssl/apache.pem
SSLProtocol all
SSLCipherSuite HIGH:MEDIUM
</VirtualHost>
@

Please help, I really wont to make it working.

History

#1 - 2012-03-05 01:15 - Andrey Avramovitch

- File myown-ssl added

Attaching file which didn't show properly in code tags.

#2 - 2012-03-05 09:34 - Etienne Massip

- Status changed from New to Closed

- Resolution set to Invalid
