

Redmine - Defect #10413

Creating wiki pages with special characters may be problematic

2012-03-09 15:42 - André Bachmann

Status: Closed	Start date:
Priority: Normal	Due date:
Assignee:	% Done: 0%
Category: Wiki	Estimated time: 0.00 hour
Target version:	Affected version: 1.3.1
Resolution: Duplicate	

Description

I recently noticed some little quirks when creating wiki pages with certain special characters.

For instance, I can write on a wiki page a link to a new page as `![[M&P]]`. As soon as I click on submit, the link to this page is shown in the wiki as **M&** (without the letter P). However, the resulting wiki page is called **M&P**.

The next problem is when I write a link as `![[M#P]]` on a wiki page and click on submit. This link is shown as **M**, the resulting wiki page gets the name **M#P**, which may be dangerous because a hash # has a special meaning in URLs.

Let's look at a link `![[M%P]]`. The resulting link to this wiki page is correctly shown as **M%P**. But the wiki page itself is named **M%25P**.

My Redmine environment:

```
About your application's environment
Ruby version      1.8.7 (x86_64-linux)
RubyGems version  1.6.2
Rack version      1.1.1
Rails version     2.3.14
Active Record version 2.3.14
Active Resource version 2.3.14
Action Mailer version 2.3.14
Active Support version 2.3.14
Application root  /opt/redmine-1.3.1-0/apps/redmine
Environment       production
Database adapter  mysql
Database schema version 20110902000000

About your Redmine plugins
Redmine Wiki Extensions plugin 0.3.8
Redmine Logs plugin           0.0.3
```

History

#1 - 2012-03-09 15:51 - Etienne Massip

- Status changed from New to Confirmed
- Target version set to Candidate for next minor release

#2 - 2012-03-09 16:07 - André Bachmann

There is also a problem when using these characters in a wiki text (may be related with this issue, so I post it here): If I write a percent sign directly followed by a comma, the percent sign isn't shown in the resulting wiki page (only the comma is shown). If I write an ampersand directly followed by a comma, it is shown as **x%x**, which is quite weird.

#3 - 2012-05-17 13:23 - Alexander Oryol

- File 0001-Fix-6991-ampersand-in-pagename.patch added

Added the small patch to solve the issue.

#4 - 2012-11-09 08:34 - André Bachmann

Any chance that this patch gets integrated into Redmine?

#5 - 2013-04-24 11:06 - Francesco V

Page "Version 1.2.3" result in "Version 123"

#6 - 2013-06-06 16:10 - Jaroslav Povolný

Confirming this issue, in Redmine 2.3

#7 - 2014-02-06 16:26 - carlos castro

- File error.jpg added

Is this solved?

When i create a link that has an accent in a wiki it returns me his html code (check image)...

My env:

Environment:

Redmine version	2.3.3.stable
Ruby version	2.0.0-p247 (2013-06-27) [x86_64-linux]
Rails version	3.2.13
Environment	production
Database adapter	PostgreSQL

Redmine plugins:

planner	0.4
redmine_backlogs	v1.0.6
redmine_charts2	0.2.1
redmine_ckeditor	1.0.15
redmine_didyousean	1.2.0
redmine_importer	1.2
redmine_loader	0.3b
redmine_schedules	0.5.0
redmine_summed_fields	0.0.2
redmine_todos	2.0.5
scrum2b	0.1
under_construction	0.0.1

is there any workaround for this?

#8 - 2018-05-14 23:57 - Marius BALTEANU

- Status changed from *Confirmed* to *Closed*
- Target version deleted (*Candidate for next minor release*)
- Resolution set to *Duplicate*

A patch that fixes this issue was submitted to #22967. I think that it is safe to close this issue as duplicated.
