Does your repository contain any commits? Or is it a fresh repository?

I've committed a fix in [r1343](#).

Can you confirm it fixes your problem?

#2 - 2008-04-13 01:05 - Georg Koltermann

Yes, the repo contains a lot of revisions, some 6000.

I tried the latest trunk of redmine now, and it may have fixed it. It is still consuming 100% CPU after a couple of minutes, I assume it is now building the DB cache of the repository history. I'll let it run for a while and go to sleep :)

#3 - 2008-04-13 10:59 - Jean-Philippe Lang

- *Status changed from Resolved to Closed*

- *Target version set to 0.7*

I assume it is now building the DB cache of the repository history

Yes, the changesets are stored in the database. I close this bug, reopen if needed.
Thanks for the feedback.
