Description

The below patches the wiki include macro to be able to include pages from any project.

Where I used this is I wanted my home page to include text from a wiki page, rather than text under Administrator welcome message. To do this, I simply made the below patch and set the welcome message to {{include(Home,myBaseProjectName)}}

Associated revisions

Revision 1350 - 2008-04-13 18:22 - Jean-Philippe Lang

Include macro can include a page of another project wiki using !{{include(projectname:Foo)}} (#1052).

History

#1 - 2008-04-13 17:56 - Jean-Philippe Lang

Good idea. Just a few comments:

- I think we could use the following syntax in order to be consistent with wiki links: {{include(myBaseProjectName:Home)}}
- Permission to view the included wiki page should be checked (the target projet may be private)

#2 - 2008-04-13 18:27 - Jean-Philippe Lang

- Category set to Wiki

- Status changed from New to Closed

- Target version set to 0.7

The previous changes are committed in [r1350](r1350).
