Redmine - Feature #10541

Fixed start date for gantt chart (per project)

2012-03-26 13:34 - Sebastian Dreßler

Status:	New	**Start date:**

Category:	Gantt	**Estimated time:**	0.00 hour
Target version:			
Resolution:			

Description
It would be nice if the gantt chart would start at a fixed date, and **not** with the current month. The end date could be set to the current month or to the end of the project (if date of project end > current month). The "current view" could be centered around the current month, so no one needs to scroll to the current date. This is particular helpful for tracing the project timeline fast (in general I always want to see "how far I am" and "What has happened").

I definitely agree with this request. To see how the project is tracking, it is very helpful to see what has been accomplished already. Perhaps the earliest Start Date on the project could be the default starting point for the Gantt. I suppose if some prefer to start with the current month, it could be an optional feature at the project level.
