Target version:			
Resolution:	Duplicate		

Description

Request:

- Add support for filtering tasks also by the parent task ID.
- It should support
  1. Any exact value (as entered).
  2. Empty/not empty (i.e. only subtasks or only top level parent tasks).
  3. Matching and NOT matching.

Motivation:

- The management in my company where I established the Redmine is multi-level.
- Higher level manager enters the overall task on the project, containing the list of feature requirements.
- Lower level manager makes a specification and plans the works by creating a lot of sub-tasks for the above entered parent task.
- The higher level manager needs the custom view of tasks on the project where only the top-level tasks are visible.
