<b>Description</b> It would a very nice feature if redmine could have the feature:  - Sync with Mac OS X Address Book Server(ABS) ( per Carddav standard ) - Admin is able to 'connect' an ABS-contact to an existing <b>User</b> or create a new <b>User</b> for a contact - <b>Connecting</b> could be realized with following methods: - implicit comparison of some fields ( email, phone number etc. ) - explicit assignment of a ABS-contact to an <b>User</b> from admin			

History

- Status changed from New to Closed
  - Resolution set to Wont fix

I am closing this issue because Mac OS X Server was discontinued in 2022 and [Address Book Server](#) is no longer available.
