Description I searched around, but found no way to hide a custom field list entry. We have a custom field with many values in a list, which are associated to various issues. However, some of those values are no longer needed, and we don't want to see them in the list anymore. If I remove them completely from the list definition field, then that value still shows up when viewing the issue. However, if I update that issue, then the custom field value reverts to blank since its value is no longer there. I tried to prefix the entry in the list with #, but it did not hide it. I'm sure there is something simple that I am missing. Any help would be greatly appreciated.	
Related issues: Is duplicate of Redmine - Feature #9750: Archive elements in a list custom field New
