<b>Resolution:</b>	Fixed		
<b>Description</b> IMHO it could be great to differentiate saved queries: <ul style="list-style-type: none"><li>• global vs project's local</li><li>• public vs private</li></ul> This can be solved by adding icons, or maybe better: <ul style="list-style-type: none"><li>• group queries into wo groups: global and project's local, put divide between these groups (horizontal rule)</li><li>• add icons for public/private - maybe one icon only for public or private will be ok.</li></ul> Logic can be also switched, so it can be grouped by Private/Pulic and flagged by icons per global/local.
