<b>Target version:</b>	2.0.3	<b>Affected version:</b>	1.4.0
<b>Resolution:</b>	Fixed		

#### Description

Printed out some wiki pages with tables, and got something like this on the PDF:

pdf\_table.png

The original table on the wiki was like this:

#### Sequência de Estímulos e Respostas

Estímulo	Resposta
Usuário abre interface principal	Sistema apresenta tela inicial
Usuário define dados de entrada (tail number ou configuração da aeronave)	Sistema armazena os dados de entrada
Usuário escolhe opção de análise de decolagem (takeoff)	Sistema exibe tela de parâmetros para análise de decolagem
Usuário define aeroporto/pista de origem	Sistema valida e armazena aeroportos/pistas

It seems like the problem on the PDF was with *italic* words inside the table.

Apart from that, this feature is awesome, and it's getting better and better. Thanks guys!

- File *redmine pdf table.png* added

We have the same problem in tables that have no *italics* or other formatting in the table, but use **bold** to create column headers and the headings become misaligned.

!redmine pdf table bold.png!

Removing the bold formatting shows correctly aligned header row, but the table width does not appear to be correct.

### #2 - 2012-06-17 14:35 - Jun NAITOH

- File *tcpdf.rb\_table\_with\_html\_fix\_r9852.diff* added
- File *wiki\_test\_sample\_table.txt* added

Sorry, this tables problem is #69 patch's bug.

I corrected so that the html tag inside a table could not be used with a PDF export.

I finished tests on following environments.

- CentOS 6 CRuby 1.8.7, 1.9.2, 1.9.3

### #3 - 2012-06-17 14:40 - Toshi MARUYAMA

- Assignee set to Toshi MARUYAMA

### #4 - 2012-06-17 15:07 - Toshi MARUYAMA

- Target version set to 2.0.3

### #5 - 2012-06-17 15:52 - Toshi MARUYAMA

- File *before.pdf* added
- File *after.pdf* added
- Status changed from New to Closed
- Resolution set to Fixed

Committed in trunk r9853, 2.0-stable r9854 and 1.4-stable r9855, thanks.

## #6 - 2012-06-18 07:02 - Rob D

Thanks guys, formatting seems to be fixed. However, the table width still doesn't fill the page width. A table with 2 columns only fills half the page width. Should this be a separate issue? Is there any reason that we need to have a minimum of 4 columns in the layout?

```
@default_table_columns ||= 4
```

```
...
```

```
if @default_table_columns < @max_table_columns[@table_id]
```

```
  @table_columns = @max_table_columns[@table_id];
```

```
else
```

```
  @table_columns = @default_table_columns;
```

```
end
```
