Description <p>If using some additional plugin with own project tabs, standard redmine theming wraps ugly. Grouping things and making this configurable independent of plugins default would be best. So However plugins register default, a admin can configure how hooked in menu shall be shown.</p> <p>Besides general alignment (left vertical like chilis theme) or horizontal like redmine standard) and admin shall be able to choose the order (top-down or left right) how the menu items are shown, and at least if they are shown at all (e.g no New issue menu).</p> <p>Furthermore such a 1 level menu can get soon very long if you have "some" plugins. SO a grouping feature (2nd level menu) shall be configurable) . First level menu what juts be a free configurable label and below a admin can drop core/plugins menu items as he wants.</p> <p>Themeing shall support jquery features like slide-in and slide-out and accordion (see chili grouping feature) easily. There fore you neebd more than just one javascript file added.</p> <p>See also left alignment main for chili project default theme and grouping feature. https://www.chiliproject.org/issues/559</p> <p>(1-17/17)</p>
