Description			
<p>I'm using Redmine 1.3.1 stable. Now, I want to customize a plugin which doing the same task with reminders.</p> <p>There some plugins similar to reminders are: send_whining or redmine_reminder. But all of them just send email reminder once time, based on the parameter: days=X</p> <p>I want to send email reminder three times from the created_on and due_date. It means that: each issue have a created_on and due_date:</p> <pre>range = (due_date - created_on) / 3</pre> <p>The 1st email: created_on + range The 2nd email: created_on + range * 2 The 3rd email: on the due_date</p> <p>Thus, I do it by call the 'end_reminders' task three time. But I don't know how to create a task invoke another task inside it.</p> <p>Is there any plugin can do that?</p> <p>Thanks you for all your help!</p>
