Description Hi All, If I use the following commands in php: \$url = "http://mydomain.com"; \$echo = file_get_contents(\$url); I get results back. Now, If I try to get some xml back, \$url = "http://mydomain.com/issues.xml"; I get no results back, because I have to send authentication. Can this be done by sending the API key in the URL ? something like: e.g. \$url = "http://mydomain.com/issues.xml?api=myapikey"; I havn't played with the Rest API yet in PHP. I am thinking this should be able to work without it. Thanks, Rick
