Description I have been trying to figure out how to link a phone number so that a mobile user can click on it and call the number. The html code is quite simple however I cant figure out how to make it work in redmine. Any help would be deeply appreciated. Html Code example: Call us free!</a

History

- #1 - 2012-05-11 21:15 - Mischa The Evil
- Subject changed from Text Syntax to Add support for the 'tel' URL protocol handler
 - Category set to Text formatting

Dunno though if it is a (frequently) needed feature for most of the Redmine users.

- We have a user defined field for the users with the telefon number of the user. At the moment we cannot create a link out of it because the tel:/ protocol is not allowed

I have submitted a patch for it in [#41941](#).

With the markdown option the tel protocol is supported out of the box when writing the link in this format:

[+12 341234] (tel:+12341234)
