Target version:			
Resolution:	Invalid	**Affected version:**	

Description

Hi...

i have a LDAP server and its has a group called .

cn=internal ou=group,dc=example,dc=com

`--users of this group is :`

uid=user1,ou=staff,dc=example,dc=com
uid=user2,ou=staff,dc=example,dc=com

i need to only authenticate the users under cn=internal ....

is it possible to achive that in redmine , please note that im currently using redmine version 1.3.1

LDAP search for the cn=internal group as follows ,

dn: cn=internal,ou=group,dc=example,dc=com
objectClass: groupOfNames
objectClass: top
cn: internal
member: uid=user1,ou=user,dc=example,dc=com
member: uid=user1,ou=user,dc=example,dc=com

History

#1 - 2012-05-14 09:58 - Etienne Massip

- Status changed from New to Closed

- Priority changed from High to Normal

- Resolution set to Invalid

Just set base DB field accordingly?

An LDAP filter field has been added in 1.4.0.

Please ask your questions in Help forum, the tracker is for actual defects.

#2 - 2013-01-28 09:06 - john val

By using LDAP filter cant achieve the ldap group authentication ..., i think it is just to run filters such as "mail=*@domain.com "

IS Redmine supporting group authentication[1] ?
