Redmine - Feature #10927

Add a filter on the "Issues" page to hide subtasks

Description
I would find useful to add a filter to hide subtasks in the issue list. This could help to limit the issue list size, specially if you use subtasks a lot.
This could be also interesting to add a marker that indicates that a task has subtasks.

What you need here would be "AND ParentTask IS NULL" as one of the filter options - currently although you can display the parentTask column, you cant filter on it.

I believe these are related tasks: #10553, #10559
Maybe related: #9992 (could be resolved with AND ParentTask = <someID> filter)

Yes, it will be great! If I'm goint to set priorities for tasks and set sorting by priority I can't see which tasks are the subtasks and which are not. I think priorities are significant only on the same nesting level not across nesting levels. But now I can set priority in such way:

- task 1 (high)
- task 2 (low)
    - subtask 1 (urgent)
    - subtask 2 (critical)
- task 3 (urgent)

And I have some ambiguity:
I need to work on tasks in such order

- subtask 2
- task 3
- subtask 1
- task 1
- priority for task 2 is not significant!

or in such order

- task 3
- task 1
- task 2
    - subtask 2
    - subtask 1

I think the second will be correct. That is priority takes place only for items in group!
May be it depends on used workflow.
If I want to fix some subissue while the parent issue has low priority or is blocked I can simply move this subissue to another parent issue or to move it one level up.

What do you think about it?

+1 This would be a very useful feature.

Also, this is not a duplicate, although [#9992](#) could be used as a means of achieving this. I suggest this be changed to related to or depends on.
