Resolution:	Invalid		**Affected version:**	1.4.2

Description

Hi all,

I tried reading (imap) mails on a gmail account (from a Swedish Windows 7 machine as well as from a reagular Gamil account, but I keep getting errors on the date format (which I am not explicitly specifying in my mail).

The command reporting the below was:

```
{server}:/my prompt$ rake -f /path/to/apps/redmine/Rakefile redmine:email:receive_imap \
RAILS_ENV="production" \
host=imap.googlemail.com port=993 ssl=1 username=first.last@gmail.com password=whatever \
project=projectname tracker=Deviation status=New \
allow_override=project,tracker,status,priority \
folder=INBOX move_on_success=issues_received move_on_failure=issues_ignored

```

Is there anything more I try to narrow in on what I'm experiencing?
