

Redmine - Defect #10990

Progress computation issue for versions with subtasks

2012-05-22 11:11 - Evolis BE-Soft

Status:	New	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Issues	Estimated time:	0.00 hour
Target version:		Affected version:	1.4.0
Resolution:			
Description			
For a given version (says R1), I define a task A with two subtask A.1(2h) and A.2(8h).			
When A.1 is done, the progress bar value is 10%			
Then if A.2 is done, the progress bar value is 50%			
I calculate the issue done ratio with the issue status and done = 100%			
It appears that progress computation should not take care of parent estimated time.			

History
