

Redmine - Defect #11056

text color syntax not working

2012-05-30 16:40 - Amrish Bharatiya

Status:	Closed	Start date:	
Priority:	Normal	Due date:	2013-03-24
Assignee:		% Done:	0%
Category:	Wiki	Estimated time:	0.00 hour
Target version:		Affected version:	2.0.0
Resolution:	Invalid		

Description

I am not able to apply text color styles to my wiki pages as shown below:

 I did search around for this problem and thought that setting self.filter_styles=false in formatter.rb would resolve it, as you can see from the image below, I have it set with no luck!

 code.PNG

I am using bitnami virtual appliance with following version of application stack:

Environment:

```
Redmine version      2.0.0.stable
Ruby version         1.8.7 (x86_64-linux)
Rails version        3.2.3
Environment          production
Database adapter     MySQL
```

Redmine plugins:

```
no plugin installed
```

Is there anything else I am missing?

Thanks for your help!

- Status changed from New to Closed

- Resolution set to Invalid

With Redmine >= 1.4.0:

```
p{color:red}. this is red
```

displays:

this is red

#2 - 2012-06-02 01:26 - Amrish Bharatiya

Thanks for the quick response.

I was wondering if there is anything planned to allow formatting part of text withing a paragraph.

#3 - 2012-07-18 14:04 - Keats .

- Status changed from Closed to Reopened

it's not working with 2.0.3 at least

#4 - 2013-03-17 13:36 - Dipan Mehta

This actually works but with a peculiar behavior

```
some text
```

p{color:red}. this is red

produces

some text
p{color:red}. this is red

(not red). But

some text

p{color:red}. this is red

produces

some text

this is red

I don't know if this is expected behavior or I am missing something!

Dipan.

- Due date set to 2013-03-24

- Status changed from Reopened to Needs feedback

Well this is a problem which applies on many wiki syntaxes.

The same with the code, ordered or unordered list or even with headings.

This is more likely a general textile problem.

Please give done feedback until next week. Otherwise this issue will be closed.

#6 - 2013-03-18 08:56 - Etienne Massip

- Status changed from Needs feedback to Closed

You need to put some space before the "p. ".

Every lonely line is a paragraph in Textile, if it is not a lonely line then it can't be a paragraph; using the "p. " simply allow you to adjust the paragraph style or set language (see <http://redcloth.org/hobix.com/textile>).

Understood!

But trust me - had this issue not been filed, I would have never come across that thing such as 'color' is even possible! The documentation is clearly lacking this and many similar things that I don't even know yet!

Dipan.

As briefly described in [online help](#), Redmine rely on Textile for text formatting; there are probably a lot of Textile formatting possibilities you (and I) don't even know they exist you might be interested in.
