### Description

I want to export all of our issue from one project to cross data with one other data program.
Each of our project has two name :
- General name (classic field)
- Id name (like DOG-856-TRE-6355)
So, we create a new custom field for projects for Id name.

But, when we want to export issue, we can't add other row name from project execpt "project name".

How can I do this ?
