

Redmine - Defect #11111

Problem with permissions while adding second repository to a project

2012-06-07 22:04 - Andrew Yanush

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	SCM	Estimated time:	0.00 hour
Target version:		Affected version:	
Resolution:	Invalid		
Description We are using redmine version 2.0.1.devel.9741. Also using plugin https://github.com/okamoto/okamoto-redmine-scm-creator . After creating second repository to the project user can't be authorized to using it. Seems like repository is created however permissions are not added to use it. Apache were configured using this manual http://www.redmine.org/projects/redmine/wiki/Repositories_access_control_with_apache_mod_dav_svn_and_mod_perl			

History

#1 - 2012-06-08 00:19 - Etienne Massip

- Status changed from New to Closed
- Resolution set to Invalid
