Redmine - Defect #11154

LDAP Authentication Only Works with Domain Admin

2012-06-14 01:56 - Tom Wardrop

Target version:			
Resolution:	Invalid	**Affected version:**	

Description

I can only get LDAP authentication to work if I use our main domain admin account. Even my account with virtually full read/write access doesn't work. The problem seems be that the LDAP#search method returns nil (no results), but seems to work with our main domain admin account.

Is this a known issue? Can anyone else get away with using a less privileged account as the LDAP authentication account in Redmine?

History

- Status changed from New to Resolved

Hmm, I fixed it by prefixing the username with the first part of the domain name, e.g. domain\username. This must be optional for the main domain admin account. Weird. Can't believe I didn't try this earlier though.

- Status changed from Resolved to Closed

- Resolution set to Invalid

Fine, thanks for the feedback.
