Description

We use the Bitnami stack at work and I've realized that date-sorting spent times always has a secondary sort of "physical order"-ascending (I don't know of a better way of expressing it).

This way, when I enter two different spent times on the same date (usually under the same issue) and then get a report, the last entry appears second from top.

Could you fix it so that when the date order is reversed, the physical order is reversed as well?
