Redmine - Defect #11273

ActiveRecord::SubclassNotFound

2012-06-27 12:11 - zam kp

Status:	Closed	**Start date:**	
Priority:	High	**Due date:**	
Assignee:		**% Done:**	0%
Category:		**Estimated time:**	0.00 hour
Target version:			
Resolution:	Invalid	**Affected version:**	2.0.0

Description

Hi,

I'm trying to upgrade my redmine from 1.3.0 to 2.0.0, but i have problems with the database migration, when i run the command :
rake db:migrate RAILS_ENV=production

its showing an error like
rake aborted!
uninitialized constant RAILS_ENV

MY ERROR LOG IS:

ActiveRecord::SubclassNotFound (The single-table inheritance mechanism failed to locate the subclass: 'GoogleAppsAuthSource'.
This error is raised because the column 'type' is reserved for storing the class in case of inheritance. Please rename this column if
you didn't intend it to be used for storing the inheritance class or overwrite AuthSource.inheritance_column to use another column for
that information.):
app/models/user.rb:139:in `try_to_login'
app/controllers/account_controller.rb:143:in `password_authentication'
app/controllers/account_controller.rb:138:in `authenticate_user'
app/controllers/account_controller.rb:30:in `login'

Here is the list of plugin that i am using in my old redmine:
1)Google Apps plugin

2)Redmine Code Review plugin

3)Redmine Hudson plugin

Please help me

Thanks

History

#1 - 2012-06-27 14:20 - Etienne Massip

- Status changed from New to Closed

- Resolution set to Invalid

Clearly a Google Apps plugin issue, please contact its author or post in Plugins forum.
