

Redmine - Defect #11311

New issue relationship

2012-07-03 13:58 - Michał Chelmiński

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Issues	Estimated time:	0.00 hour
Target version:		Affected version:	2.0.1
Resolution:	Duplicate		

Description

I have a problem with linking issues with a proper relationship. For example, issue A lasts from 02/23/2012 to 02/30/2012. Task B is connected with the issue A with a proper relationship, which prohibits issue B to give an end(due)date later(after) than the ending(due)date of the issue A. Task B can take only the date of the task A.

It is very necessary to me, because I supervise a very large project. I developed the main project in which I have the main process(task) specific by start and end date. Now, to that main project I created sub-projects, which are departments of our company and within those sub-projects are carried out some issues(tasks), which can not cross the ending(due) date of main process(task) from the main project.

Now we have in REDMINE only related issues like:

1. related to
2. duplicates
3. duplicated by
4. blocks
5. blocked by
6. precedes
7. follows

I think we need one more...

I'll be very grateful for Your help.
