Redmine - Feature #11313
Automatic closing of resolved issues
2012-07-03 16:54 - Pavel Loginov

Status: New
Priority: Normal
Assignee: % Done: 0%
Category: Issues workflow Estimated time: 0.00 hour
Target version: Candidate for next major release
Resolution: 

Description
Are there any plans to implement this feature? Would be great to turn on automatic closing of issues, if they have been marked as resolved for X days. I know, that there is a plugin there, but it’s not been updated for quite a while now and doesn't install on some instances of RedMine. What do you think guys?

What is the point? Any resolved issue is also considered closed (by default.)

#2 - 2012-07-07 20:52 - rm user
Yes, it would be helpful.
1) Resolved doesn’t mean issue is closed
2) Closed issue means you don’t need to get back to issue anymore, it’s completely closed.
3) Resolved doesn’t mean always that issue was properly fixed, very often it needs testing.

#3 - 2012-07-09 11:06 - Pavel Loginov
Exactly. In our workflow every resolved issue needs to be closed by project leader or issue author. However, people are no robots and sometimes miss/forget to review a resolved issue which then simply goes down the issue queue. Would be highly useful if such issues could be auto-closed after "expiration". So I think it’s pretty simple and straight forward: if an issue’s status was “A” for X days, then it’s status is changed to “B”. That’s it. Is it possible to just update the old plugin [https://github.com/edtsech/redmine_x_closed/tree](https://github.com/edtsech/redmine_x_closed/tree) so that it installs on the newest versions of Redmine?

Here’s another request for this, posted a year ago: [http://www.redmine.org/boards/3/topics/20046…](http://www.redmine.org/boards/3/topics/20046…)

#4 - 2013-02-14 20:51 - Alexey Chepurnykh
It’s a highly required feature. In our installation we have an agreement: if a resolved issue is not closed for 30 days, we close it by hands. The "Langoliers" eat my time. Please, help.

#5 - 2013-02-15 02:09 - Filou Centrinov
For “Resolution: Cant reproduce” this feature would be also helpful. A suitable delay time might be 90 days.

#6 - 2013-03-21 09:05 - Dipan Mehta
There is some interesting discussion on #1306 for similar aspect.

#7 - 2013-03-26 16:22 - Anonymous
For me it would also be useful to have such a feature. For me, the inspiration is the (old / classic-style) SourceForge.net tracker. There, a status "Pending" exists for issues. If an issue is put into status "Pending", then if no change is made to it within 14 days, it is automatically closed. On the other hand, if a change is made, it is automatically put back to status "Open".

Having such a feature would be highly useful to us. And perhaps also to redmine.org: There are many ancients reports here, and for many, redmine staff now is adding comments like "Please respond until DATE, otherwise we will close this issue". But staff has to remember those issues, and on/after DATE, go back to them, and change their status manually to closed. With a "pending" status that could be automated.

2024-06-06
Of course in Redmine, one may want to have a somewhat more general "status transition" facility. I.e. it would be nice if each issue status would get these extra fields (in addition to the existing "Name", "Issue closed" and "Default value"):  
* "If issue is in this status for more than [ checkbox / textfield ] days, change status to [ popup ]."  
* "If issue is updated while in this status, change status to [ popup ]."

(Of course the last option would only have an effect if the user making the issue update did not select some other target status manually).

This would also be helpful in our environment.

Just as an example, in our internal helpdesk system when a ticket is solved it will go into a 'Solved / Resolved' status, then if no feedback is provided by the tech or user it is automatically closed after 2 days. This allows the users a testing time while not clogging up the tech's ticket lists with active tickets. (The 2 days is adjustable, just what works for us).

Our clients don't always close resolved issues :(

#12 - 2014-01-02 14:03 - Daniel Felix
Yes, we encounter sometimes the same issues. Some issues have a long wait time until they were really closed.

+1!

Totally agree with you. This feature would be very useful for our company as well. When a issue has been resolved, we notified it to the client and if everything is ok or if we don't receive any answer in 3 days, we close the issue manually. A feature like this could automate this process and it would be very useful for us.

Is there any chance to include this feature into the roadmap for the next product iterations?

This is essential if you want to have a retest for a resolved issue.

#24 - 2015-02-22 16:29 - Jogi 1j
I tried to create a plugin for this problem, but it's my first plugin, so I'm not sure if you find an error, please contact me, thank you. It's not the final version.

Highly requested!

Jogi : your plugin is not compatible with 3.0 redmine installation.

#26 - 2015-08-20 00:44 - Ivan Prokudin
I've tried Jogi's plugin and and it's suit me (I use redmine 2.6). The only thing that I need is notifications about closing the issues. So I'm offering USD 20.00000000 via FreedomSponsors to the first person who fix it.

Offer link: https://freedomsponsors.org/issue/732/close-notifications

You can also join me and throw in a few bucks there and we'll get it fixed faster :)

If you fix this issue (see my acceptance criteria there) please use that site to request your payment.

Isn't that a better job for a custom script and a cron job?
Not every Redmine installation has to have a particular resolved state.
It's also a more versatile approach as you can have multiple automated status transfers and also for different workflows.
