

Redmine - Defect #11362

Redmine API - "Title Version Type is not included in the list"

2012-07-10 18:38 - Michael Bisbjerg

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		Affected version:	
Resolution:	Invalid		
Description			
<p>We had to map a series of values in our Redmine installation for all our issues. I opted to write a small script to simply iterate, map and call the XML api to set the issues to their new values.</p> <p>Sometimes however, I got a response like this (HTTP Status Code 422):</p> <pre><?xml version="1.0" encoding="UTF-8"?> <errors> <error>Title Version Type is not included in the list</error> </errors></pre> <p>I called the API like this:</p> <pre><?xml version="1.0" encoding="utf-8"?> <issue> <custom_field_values> <3>Utilities &gt;&gt; Various</3> </custom_field_values> </issue></pre> <p>(Which btw. is invalid XML as pr. issue #6345, but the docs don't explain how to do it otherwise)</p>			
<p>I called the API a total of roughly 470 times, and 80 or so failed with the above error. Sometimes, I would notice two calls, exactly alike (setting the same new value), where one would give the error - and the other wouldn't.</p>			

History

#1 - 2012-07-10 18:45 - Michael Bisbjerg

I also tried using this XML from [#8698](#), which seems to work when I try it - but not in the 80~ish issues which also failed previously. It gives the same error.

```
<?xml version="1.0" encoding="ISO-8859-1" ?>
<issue>
  <custom_fields type="array">
    <custom_field>
      <id>3</id>
      <value>Utilities &gt;&gt; Various</value>
    </custom_field>
  </custom_fields>
</issue>
```

#2 - 2012-07-10 20:46 - Etienne Massip

How do you issue the request?

#3 - 2012-07-11 03:18 - Michael Bisbjerg

A various number of ways.

The HTTP debugger Fiddler, <http://fiddler2.com/fiddler2/>

C# Programming language

Always a PUT request, other methods are disallowed (Gives 405's if I remember correctly.)

#4 - 2012-07-11 23:01 - Etienne Massip

If you're trying to update an issue then you should probably send updated issue_id?

#5 - 2012-07-12 00:41 - Michael Bisbjerg

Is that necessary if I'm PUT'ing against:

[http://site.com/issues/\[id\].xml](http://site.com/issues/[id].xml)?

I thought the ID was implicit then.

If I provide the ID I could've just posted to:

<http://site.com/issues.xml>?

Some better docs on XML updating would be awesome. Is there are more comprehensive guide than that available here:

http://www.redmine.org/projects/redmine/wiki/Rest_Issues#Using-XML ?

No, indeed, please forget about my stupid comment.

#7 - 2012-07-12 00:48 - Etienne Massip

Is that possible that you have just added a required custom field which you need to supply a value for?

#8 - 2012-07-16 20:29 - Michael Bisbjerg

But if the issue already exists, the field must have been filled out - right?

Then again, I've noticed fields being magically set when I update other fields - as the UI doesn't allow for these fields not to be filled out, and thus assumes some 'default' value.

Has anyone noticed the error:

"Title Version Type is not included in the list"

Before?

Well, not if you just added them.

As a final thought, I'd go for a plugin issue if you have any installed?

#10 - 2012-07-16 20:45 - Michael Bisbjerg

Ah, right. There **are** people constantly changing this system at my office.

I'd love to have some better error messages though ;)

#11 - 2012-07-28 17:33 - Jean-Philippe Lang

- Status changed from New to Closed

- Resolution set to Invalid
