<b>Resolution:</b>	Invalid		
<b>Description</b>			
I spent some time trying to make this feature working for me. I tried many options and then I found out that it is not working with "Default" selected. With other options it is working.			
I attach screenshots.			
Maybe I am missing something. Is there any setting to select "default" category.			
I checked in project and I see these 3 types but there is no way to select default one.

Is there any setting to select "default" category.

Go the Administrations -> Enumerations and edit an activity to mark it as default.
