Category:			**Estimated time:**	0.00 hour
Target version:	0.7.1			
Resolution:	Fixed		**Affected version:**	

Description

i've a project, with three sub-projekts

- customer-name

1. projekt
2. projekt
3. projekt

And the customer is a user of redmine, wich is added to the Projekt „ customer-name" and the first two projects. The third project schould only be visible to me, becaus this is a surprise for the 100th aniversary of my customer. but at my-server.tld/projects/show/customer-name can see all sub-projects.

At my-server.tld/projects there is everything ok - the customer can only see the main-project and the first two sub-projects …

Associated revisions
