

Redmine - Defect #11563

Can't Install any plugin for Redmine

2012-08-01 15:42 - john zhel

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		Affected version:	1.4.4
Resolution:	No feedback		
Description			
<p>My machine info: Build Operating System: Linux 2.6.18-194.11.1.el5 x86_64 Red Hat, Inc.</p> <p>Downloaded BitNami redmine 1.4 stack from here http://bitnami.org/stack/redmine/</p> <p>After installation, I can successfully see Redmine and login as a user.</p> <p>Next, I just need some plugins.</p> <p>I followed the instruction here: http://answers.bitnami.org/questions/1785/install-the-bitnami-redmine-plugins</p> <p>Copy the plugin files to the "plugins" directory and run the following in Terminal</p> <pre>\$ cd installdir \$./use_redmine \$ cd apps/redmine/htdocs \$ rake db:migrate_plugins RAILS_ENV=production</pre> <p>After rake, I see the following error in Terminal:</p> <pre>(in /home/abcdefg/public_html/pm/apps/redmine/htdocs) rake aborted! uninitialized constant YAML::ENGINE /home/abcdefg/public_html/pm/apps/redmine/htdocs/Rakefile:4:in `require' (See full trace by running task with --trace)</pre> <p>Why is that? How to fix it?</p> <p>I also tried a plugin that does not need migration. Just copy the files over to plugins directory, and type <code>./ctlscript.sh restart Redmine</code> in terminal and it seems running ok and I checked status, it shows:</p> <pre>subversion already running apache already running mysql already running</pre> <p>But, when I go the the browser and browse to http://localhost:8082/redmine/ , it returns 500 internal server error message; the error goes away if I deleted the plugins files I copied in.</p> <p>In summary, I have 2 problems, both related to installing redmine plugins.</p> <ol style="list-style-type: none">1. can not run <code>rake db:migrate_plugins RAILS_ENV=production</code>2. for plugins that do not need migration, new plugins cause 500 internal server error <p>What should I do to debug these problems? Thank you so much for your help :)</p>			

History

#1 - 2012-08-30 12:04 - Etienne Massip

1. Run rake with `--trace` as suggested
2. Look into your `production.log` file to get error stack trace

#2 - 2012-08-30 16:40 - john zhel

Hello Etienne,

Thank you for replying to my questions.

How do I "Run rake with --trace"? (I'm 100% NB here, LOL) Please advise :)

#3 - 2012-08-30 17:07 - Etienne Massip

rake db:migrate_plugins RAILS_ENV=production --trace =)

#4 - 2013-02-01 21:43 - Jan Niggemann (redmine.org team member)

- *Status changed from New to Needs feedback*

#5 - 2013-09-01 22:53 - Jan Niggemann (redmine.org team member)

- *Status changed from Needs feedback to Closed*

- *Resolution set to No feedback*
