

Redmine - Defect #11563

Can't Install any plugin for Redmine

2012-08-01 15:42 - john zhel

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:		Estimated time:	0.00 hour
Target version:		Affected version:	1.4.4
Resolution:	No feedback		
Description			
My machine info: Build Operating System: Linux 2.6.18-194.11.1.el5 x86_64 Red Hat, Inc.			
Downloaded BitNami redmine 1.4 stack from here http://bitnami.org/stack/redmine/			
After installation, I can successfully see Redmine and login as a user.			
Next, I just need some plugins.			
I followed the instruction here: http://answers.bitnami.org/questions/1785/install-the-bitnami-redmine-plugins			
Copy the plugin files to the "plugins" directory and run the following in Terminal			
<pre>\$ cd installdir \$./use_redmine \$ cd apps/redmine/htdocs \$ rake db:migrate_plugins RAILS_ENV=production</pre>			
After rake, I see the following error in Terminal:			
<pre>(in /home/abcdefg/public_html/pm/apps/redmine/htdocs) rake aborted! uninitialized constant YAML::ENGINE /home/abcdefg/public_html/pm/apps/redmine/htdocs/Rakefile:4:in `require' (See full trace by running task with --trace)</pre>			
Why is that? How to fix it?			
I also tried a plugin that does not need migration. Just copy the files over to plugins directory, and type <code>./ctlscript.sh restart</code> Redmine in terminal and it seems running ok and I checked status, it shows:			
<pre>subversion already running apache already running mysql already running</pre>			
But, when I go the the browser and browse to http://localhost:8082/redmine/ , it returns 500 internal server error message; the error goes away if I deleted the plugins files I copied in.			
In summary, I have 2 problems, both related to installing redmine plugins.			
<ol style="list-style-type: none">1. can not run rake db:migrate_plugins RAILS_ENV=production2. for plugins that do not need migration, new plugins cause 500 internal server error			
What should I do to debug these problems? Thank you so much for your help :)			

History

#1 - 2012-08-30 12:04 - Etienne Massip

1. Run rake with `--trace` as suggested
2. Look into your production.log file to get error stack trace

#2 - 2012-08-30 16:40 - john zhel

Hello Etienne,

Thank you for replying to my questions.

How do I "Run rake with --trace"? (I'm 100% NB here, LOL) Please advise :)

#3 - 2012-08-30 17:07 - Etienne Massip

rake db:migrate_plugins RAILS_ENV=production --trace =)

#4 - 2013-02-01 21:43 - Jan Niggemann (redmine.org team member)

- Status changed from New to Needs feedback

#5 - 2013-09-01 22:53 - Jan Niggemann (redmine.org team member)

- Status changed from Needs feedback to Closed

- Resolution set to No feedback
