I checked out redmine from github, and just on master branch.
use gmail's smtp service(port 587) and enabled the startles. No tis setting.

If I turned the setting to just :smtp, all mails send well. But for :async_smtp, no email would be send.
And no error tip, no error log. wired....

by the way, I use Unicorn as the server, and I found a warning log with in unicorn.log. I'm not sure whether it is related.

```
/opt/Ruby-1.9.3-p194/lib/ruby/gems/1.9.1/gems/activesupport-3.2.6/lib/active_support/dependencies.
rb:251:in `block in require': iconv will be deprecated in the future, use String#encode instead.

Same as #11376:

> Replace smtp_settings with async_smtp_settings in your configuration.yml file if you're using async_smtp method.

Well, it seems to be working :)

But maybe this is a problem as nothing mentioned in the manual wiki, and worse, it only have the invalid content which link to [this post](#) on the wiki page [Email Configuration](#). I think this cause a huge misleading.
