| Description | | | |
| <p>I'm new to Ruby and Redmine, just download the stable version and try to setup with Apache, MySQL and Git, already spending a whole week on it but still can't get everything running.</p> <p>Most of the wiki post related to using Apache + passenger are referring to version 1.x. I cannot locate a detail step by step installation guide and get everything install correctly.</p> <p>Any 2.0 complete installation guide out there?</p> | | | |
