<b>Description</b>	
<p>I think it would be great if certain roles could be specialized to operate per category.</p> <p>For in ticket management system, we have two dimensions:</p> <ul style="list-style-type: none"><li>- the hierarchical organization</li><li>- the categories of incidents</li></ul> <p>It would be better if it was possible to give some roles acting on organizational units , and other acting on categories.</p> <p>In a ISO9001 quality management system for example, there are "quality responsables" per organizational units et pilots per processes.</p> <p>A possibility to have this in redmine would be to map organizational units to projects and subprojects, and ISO9001 processes to issue categories - but in current version, pilots will have same permissions on their own process and on all others.</p> <p>Of course, this links this issue to #5358, because it will be simpler if subprojects share their parents categories.</p>
