Description I think it would be great to have a feature for doing broadcasts, more specifically for administrative purposes like: - informing all users of downtime or some other operation - notify users of some new feature.. This could be just a text box that would allow sending to all registered users (or if you want, just some set of them).

We can have *broadcast* mail basically for this.

Ideally, admin should be able to send mail to all members, and a project manager should be able to send a mail to all project members.

That would be it!
