Category:	SCM	**Estimated time:**	0.00 hour
Target version:			
Resolution:	Invalid	**Affected version:**	1.3.2

Description

Hi there!

I'm moving all the git repositories from github to Redmine, since my company intend to use it handle our project management tasks. After creating a new project, the git repository is automatically initialized through gitolite. After that, I clone the git repository from github into my local workstation, update the remote with my Redmine / Git server address and push the repository into it.

After that, I think that the changesets insertion process into the database is started when I access the project's Repository section for the first time. However, the process is interrupted, being generated a 500 error page.

On the production log, is being registered the following error:
ActiveRecord::StatementInvalid (Mysql::Error: Duplicate entry '13-c2c826115ca4fd31c047781c515c8a19bfe50a12' for key 'changesets_repos_rev': INSERT INTO `changesets` (`committer`, `repository_id`, `committed_on`, `scmid`, `comments`, `revision`, `commit_date`, `user_id`) VALUES('user <<u>user@domain.com</u>*>', 13, '2012-04-24 09:07:39', 'c2c826115ca4fd31c047781c515c8a19bfe50a12', 'close #2 - message\nsee #3 - partially removed mentions to project - lots more to clean', 'c2c826115ca4fd31c047781c515c8a19bfe50a12', '2012-04-24 09:07:39', NULL)):*

I would like to say that I've use the exactly same approach to an other project and all went well.

Here goes my system information:
Redmine Version - 1.3.2

Ruby version   1.8.7 (i686-linux)
RubyGems version   1.8.15
Rack version   1.3
Rails version   2.3.14
Active Record version   2.3.14
Active Resource version 2.3.14
Action Mailer version   2.3.14
Active Support version 2.3.14
Edge Rails revision   unknown
Application root   /usr/share/redmine
Environment   production
Database adapter   mysql
Database schema version 20110902000000

About your Redmine plugins
Redmine Git Hosting Plugin 0.4.2

Thanks in advance for the help,
Best regards
