

Redmine - Defect #11717

Repository links: Spaces and multiple repositories don't mix.

2012-08-27 16:03 - Thomas Themel

Status:	Closed	Start date:	
Priority:	Normal	Due date:	
Assignee:		% Done:	0%
Category:	Text formatting	Estimated time:	0.00 hour
Target version:		Affected version:	1.4.1
Resolution:	Invalid		
<b>Description</b> <p>This may or may not be a bug depending on the precise specification, but I suppose it should work... When using Redmine links, I can either</p> <ul style="list-style-type: none"><li>• link to a file in a non-primary repository using source:myrepository//path/to/file or</li><li>• link to a file with spaces using source:"path/with spaces/to file.txt"</li></ul> <p>It would appear logical that these two could be combined to form a link to a file with spaces in a non-primary respository using source:myrepository "path/with spaces/to file.txt", but that is not recognized as a Redmine link (or at least, recognized only up to the   character). I suspect that the problem is with the giant regexp in parse_redmine_links in `application_helper.rb`, but it is a little too intimidating for me to wade in there and attempt a fix myself.</p>			

History

#1 - 2012-08-27 16:19 - Etienne Massip

source:"myrepository//path/with spaces/to file.txt" works on trunk, did you try it?

#2 - 2012-08-27 17:57 - Thomas Themel

- Status changed from New to Resolved

Thanks, that did it!

#3 - 2012-08-27 18:48 - Etienne Massip

- Status changed from Resolved to Closed

- Resolution set to Invalid
