Description

When I'm trying to create a new forum, I've got an "Internal Error"; the log file presents the following error:

```
NameError (undefined local variable or method `parent_id' for #<Board:0x10defb88>):
  app/models/board.rb:85:in `validate_board'
  app/controllers/boards_controller.rb:70:in `create'
```

I'm using devel - [r10382](#)

is there anything I can do to fix this or is it really a bug?

History

#1 - 2012-09-15 17:38 - Etienne Massip

Did you run database migrations?

#2 - 2012-09-15 17:48 - Jean-Philippe Lang

- Status changed from New to Closed
- Resolution set to Invalid

This is a migration issue indeed.

#3 - 2012-09-15 19:29 - Erica Gallindo

You are right. As I update my redmine installation every week, I must have forgotten to run migrate in one of my updates. Thanks for the feedback. Lesson learned!

```
# rake db:migrate RAILS_ENV=production
== AddBoardsParentId: migrating =====
-- add_column(:boards, :parent_id, :integer)
   -> 0.2695s
== AddBoardsParentId: migrated (0.2696s) =====
```
