Resolution:				

Description

I wanted to have two instances of redmine and simply copied the directory. I called

```
rake generate_secret_token
```

in both instances, but it turned out, that i was automatically logged in into both instances. This was because the secret.rb file was not updated during regeneration, because the file already exists! There should at least be a warning or error message if the generation failed.

History

#1 - 2012-09-18 18:36 - Jean-Philippe Lang

- Tracker changed from Defect to Feature

- Subject changed from secret.rb does not get regenerated to Adds an option to regenerate secret.rb
