Description

Hi,

I test a code coverage and I see a method with a test useless for me. In the Attachment Model, I see the method :

def project
container.is_a?(Project) ? container : container.project
end

After an inspection of code a container can't be a Project, because a project has not association with an Attachment.

This method has added in changeset 541 of Subversion.

I submit a patch attach to this bug.

History

#1 - 2007-11-27 12:23 - Jean-Philippe Lang

Not a critical bug, but the fix is committed in r934.

Thanks
