| Description In the API for versions , there seems to be no way of filtering the result by status or by project, for example. It would seem nice to be able to do something like : <code>http://my.redmine.org/projects/my_project/versions.xml?status=open</code> The following parameters could be considered : <ul style="list-style-type: none">• <i>status</i> (one of open, closed or locked)• <i>project name</i> (or <i>project id</i>)• <i>description</i> (would only return versions whose description would contain the value of this parameter) | | | |
