Resolution:	Fixed		
Description Now, when you are displaying column with usernames in issue list, the column is too wide. Because user firstname + lastname is too long. There are other formats (only firstname/...). And that is cool - users like to be named by firstnames. But! If there are two users with the same firstname, you can't distinguish them! It would be cool to add new username format: user firstname + first letter of his lastname and dot. For example: <ul style="list-style-type: none">• Anton N.• Sam H.• Mark S.
