

Redmine - Feature #12156

Allow to fill out given customfield with specific value via a commit message

2012-10-18 17:58 - Radek Terber

Target version:			
Resolution:			
Description If issue status is changed as result of commit to VCS, it would be useful to be able set up certain custom field to given value. Use case is thar we use only one status for Close, and in addition to that we have custom field "Resolution" that refines manner of closing: whether the issue is fixed, refused, can't be fixed etc ...

History

#1 - 2012-10-19 03:46 - Toshi MARUYAMA

- Category set to SCM

#2 - 2012-10-20 17:05 - Jean-Philippe Lang

- Subject changed from During automatic issue close via VCS commit message, to allow fill out given customfield wit specific value to Allow to fill out given customfield with specific value via a commit message

And I guess the value should be present in the commit message?

#3 - 2012-10-20 19:31 - Radek Terber

I suppose the customfield name and its value for given keyword set would be configured along with new state configuration (as I'm trying to describe in [#12158](#)).

Setup Example:

Keyword(s): "closed,done"

New state: "Close"

Customfield name: "Resolution"

Custimfield value: "Fixed"

Keyword(s): "cannot fix,can't fix,impossible"

New state: "Close"

Customfield name: "Resolution"

Custimfield value: "Cannot fix"

Keyword(s): "resoved,finished"

New state: "Close"

Customfield name: <none>

Custimfield value: <none>

FYI I closed [#12158](#) as it is a dupe of old issue [#1232](#) (which has some other dupes).
