Description

Hello Jean-Philippe,

I miss the help link from the new layout!
Maybe I'm blind, but I was not able to find this link.

I also miss those nice menu icons that was in the system before rev 747.
It is personal, but I feel this new layout is a step forward in functionality, but a small step back in looking. But
this is my opinion only.

Regards,
Balazs

History

Hi,
The Help link is currently removed. Help pages were generated
from a docbook file, which is not very easy to maintain.

I'm moving the help to an online wiki (you can have a look here:
http://dev.redmine.org/). I'll try to find a way to export the
wiki in order to make it locally accessible in a Redmine install.

Help link now points to the online guide located at:
http://www.redmine.org/guide
