Category:	UI	Estimated time:	0.00 hour
Target version:	2.2.0		
Resolution:	Fixed		
Description			
Due better formatting I'd propose to wrap issue description along with its contextual element to one additional element (div ?) with unique ID or class name to allow address description's contextual directly.			
Now, contextual element for description is in the "stream" if elements under issue itself, which makes hard to position it precisely.
