Description It would be great to have the ability to set SQL Commands as Custom Field format. On this way, we could define a selfdefined datatable as selection source or maybe some joins on redmine tables. The user itself can select some item from this list. It must be preserved in the ticketlist itself, for the case that the select result change after some month. A example could be a country list or some system list.	
Related issues: Is duplicate of Redmine - Feature #9734: Custom field , value list from datab... New
