

Redmine - Patch #12313

Misspelling in auth_sources_controller.rb

2012-11-06 16:28 - Daniel Felix

Status:	Closed	Start date:	
Priority:	Low	Due date:	
Assignee:		% Done:	0%
Category:	Code cleanup/refactoring	Estimated time:	0.08 hour
Target version:			
Description			
Replace in /app/controllers/auth_sources_controller.rb (line 28-31)			
def new			
klass_name = params[:type] 'AuthSourceLdap'			
@auth_source = AuthSource.new_subclass_instance(klass_name, params[:auth_source])			
end			
with:			
def new			
class_name = params[:type] 'AuthSourceLdap'			
@auth_source = AuthSource.new_subclass_instance(class_name, params[:auth_source])			
end			
klass_name => class_name			
Sorry for the missing patch, but i haven't a sourcecode repository currently on this machine.			

History

#1 - 2012-11-07 01:34 - Toshi MARUYAMA

It is popular to use **klass**.
class is reserved name in many languages and frameworks.

#2 - 2012-11-08 13:33 - Daniel Felix

- Status changed from New to Closed

Hi Toshi,

thanks for this hint.

I just thought it was an error, cause the word "klasse" in german means class. So I thought, it could be added as "denglish" (Mix from german (deutsch) and english). ;-)

I often seen this in some german projects. :-)
