Description

Hi,
I suggest an idea that I found on the site Ganttter.com.
I must admit on new issues to start a project is not very practical.
A view where you click on a new line to fill a new issue and side with Gantt view.
I do not know if there is an equivalent form plugin (to have traveled, I havn't found) or if it is a good idea, but it would be practical.
It is near to a MS Project.

I will develop myself well but I have not yet réunni to put me in Ruby but I think the biggest part is done in Javascript

Edouard.
