<b>Description</b>			
Hi,  After migration to Redmine 2.1.4 I have problem with correct generating links in Wiki. Normally, I have link to Wiki in my project: <a href="http://redmine.mydomain/projects/myproject/wiki/mypage">http://redmine.mydomain/projects/myproject/wiki/mypage</a> from Page: Index by title. On a wiki page I have link: <a href="http://redmine.mydomain/projects/myproject/mypage">http://redmine.mydomain/projects/myproject/mypage</a> . There is lack /wiki substring in URL. I use Redmine Markdown Formatter extension to wiki.
